Pharmacy Sales Analysis Report

Source: pharmacy_sales_v2.csv | 1,000 transactions | 5 stores | 6 medicines | 1 Jan – 27 Aug 2026 | Companion workbook: Pharmacy_Sales_Analysis.xlsx

Net revenue	Profit	Profit margin	Units sold	Top 5 share
INR 2,156,930	**INR 827,117**	**38.3%**	**45,731**	**94.0%**

Executive summary

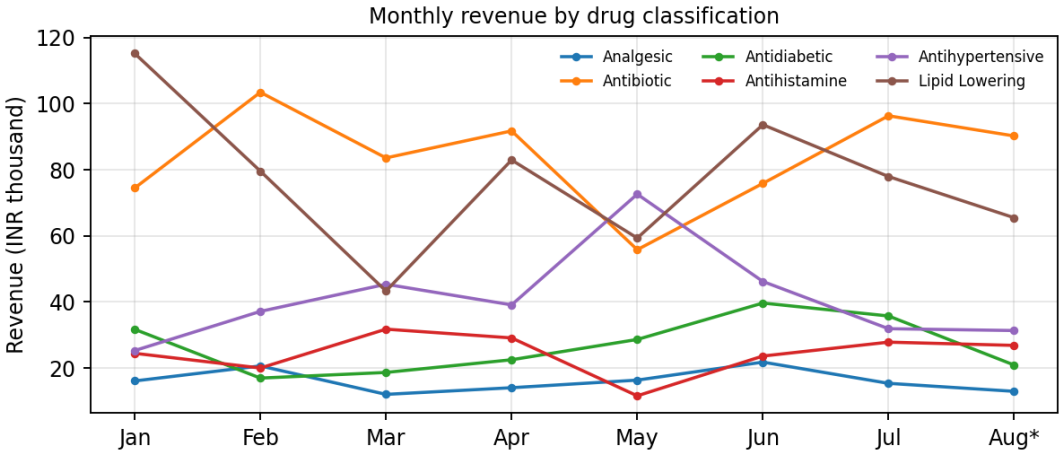

• **Revenue is concentrated.** Amoxicillin 500mg and Atorvastatin 20mg together deliver 59.7% of revenue. Because the dataset contains only six medicines, the "top 5" account for 94% of sales.

• **Generic and branded margins are effectively identical** (38.4% vs 38.3%). The data uses the same list price and unit cost for both versions of each drug, so any margin difference comes from sales mix and discounts only.

• **There is no steady growth trend.** Monthly revenue swings by double digits, and Jan→Aug totals for categories range from +24% (Antihypertensive) to −43% (Lipid Lowering). August covers only 27 days.

• **Discounts cost margin without lifting volume**: margin falls from 40.1% (no discount) to 33.5% (10% discount) while average units per transaction rise only ~2%.

1. Monthly revenue growth by drug classification

Month-on-month revenue growth (%)

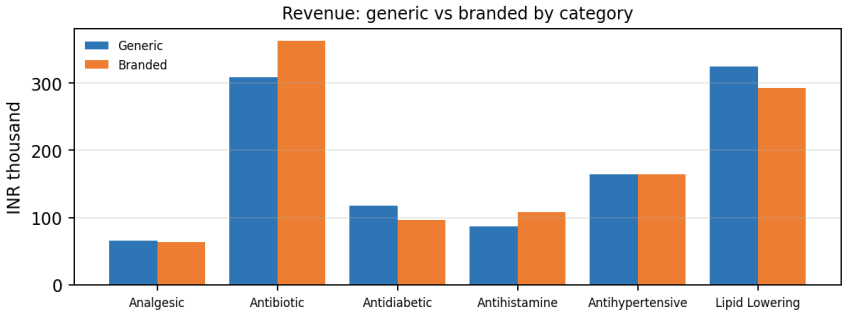

Month	Analgesic	Antibiotic	Antidiab.	Antihist.	Antihypert.	Lipid Low.	Total
2026-01	—	—	—	—	—	—	—
2026-02	+28.2%	+38.9%	-46.5%	-18.2%	+46.9%	-30.9%	-3.3%
2026-03	-41.7%	-19.2%	+10.1%	+58.8%	+22.1%	-45.6%	-15.5%
2026-04	+16.8%	+9.8%	+20.6%	-8.4%	-13.8%	+91.6%	+19.1%
2026-05	+16.4%	-39.2%	+27.3%	-60.2%	+85.7%	-28.5%	-12.6%
2026-06	+33.3%	+35.9%	+38.5%	+103.9%	-36.4%	+57.8%	+23.1%
2026-07	-29.5%	+27.0%	-9.9%	+17.8%	-30.9%	-16.8%	-5.2%
2026-08	-15.7%	-6.3%	-41.5%	-3.5%	-1.7%	-16.0%	-13.1%
Avg MoM growth	+1.1%	+6.7%	-0.2%	+12.9%	+10.3%	+1.7%	-1.1%
CMGR Jan→Aug	-3.1%	+2.8%	-5.8%	+1.3%	+3.1%	-7.8%	-2.1%
Change Jan→Aug	-19.5%	+21.2%	-34.1%	+9.8%	+24.0%	-43.1%	-13.7%
Volatility (CV)	21.5%	17.9%	31.1%	25.8%	35.4%	28.4%	8.9%

Growth is volatile for every category. Antibiotic and Antihypertensive ended higher than January (+21%, +24%); Lipid Lowering, Antidiabetic and Analgesic ended lower (−43%, −34%, −20%), although January was an unusually strong month for Lipid Lowering. Aug-26 is a partial month (to 27 Aug), so its decline is

overstated. Full monthly revenue values are on the "Monthly Revenue" sheet of the workbook.

2. Generic vs branded: profit margin and unit sales

Formulation	Transactions	Units sold	Net revenue (INR)	Profit (INR)	Margin	Avg units/txn
Generic	507	22,716	1,068,819	410,495	38.4%	44.8
Branded	493	23,015	1,088,110	416,621	38.3%	46.7
Total	1,000	45,731	2,156,930	827,117	38.3%	45.7

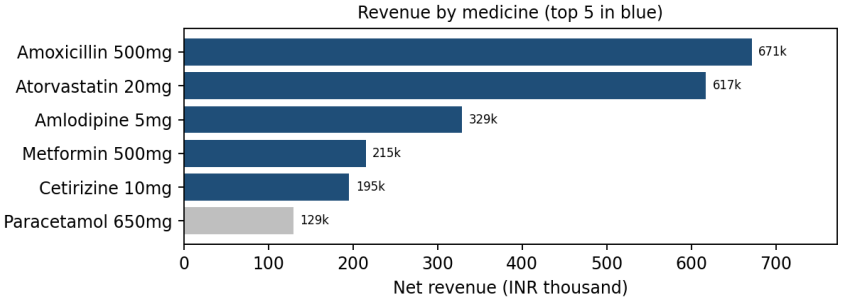

Category	Formulation	Units sold	Net revenue (INR)	Profit (INR)	Margin
Analgesic	Generic	3,753	65,497	27,967	42.7%
Analgesic	Branded	3,636	63,739	27,379	43.0%
Antibiotic	Generic	3,460	309,134	98,074	31.7%
Antibiotic	Branded	4,049	362,291	115,302	31.8%
Antidiabetic	Generic	3,777	117,880	49,894	42.3%
Antidiabetic	Branded	3,134	96,899	40,487	41.8%
Antihistamine	Generic	3,565	86,751	43,971	50.7%
Antihistamine	Branded	4,502	108,464	54,440	50.2%
Antihypertensive	Generic	3,865	164,894	72,134	43.7%
Antihypertensive	Branded	3,817	164,014	72,406	44.1%
Lipid Lowering	Generic	4,296	324,663	118,455	36.5%
Lipid Lowering	Branded	3,877	292,703	106,607	36.4%

Generic units are slightly lower (22,716 vs 23,015) but branded does not earn a better margin. By category, Branded leads revenue in Antibiotic (+17%) and Antihistamine (+25%); Generic leads in Antidiabetic (+22%) and Lipid Lowering (+11%). Analgesic and Antihypertensive are near parity.

3. Top 5 revenue-generating medicines

Rank	Medicine	Category	Units	Net revenue (INR)	Margin	Share	Cumul.
1	Amoxicillin 500mg	Antibiotic	7,509	671,425	31.8%	31.1%	31.1%
2	Atorvastatin 20mg	Lipid Lowering	8,173	617,366	36.5%	28.6%	59.8%
3	Amlodipine 5mg	Antihypertensive	7,682	328,909	43.9%	15.2%	75.0%
4	Metformin 500mg	Antidiabetic	6,911	214,779	42.1%	10.0%	85.0%
5	Cetirizine 10mg	Antihistamine	8,067	195,215	50.4%	9.1%	94.0%
6	Paracetamol 650mg	Analgesic	7,389	129,236	42.8%	6.0%	100.0%

The dataset has six medicines; Paracetamol 650mg (6.0% of revenue) is the only one outside the top 5. Note that Cetirizine ranks 5th on revenue but has the highest margin (50.4%) and the highest unit volume (8,067).

4. Pharmacy inventory recommendations

#	Recommendation	Evidence and action	Priority
1	**Protect stock of the two anchor medicines**	Amoxicillin 500mg and Atorvastatin 20mg generate ~59.7% of revenue (INR 6.7 lakh and 6.2 lakh). Keep the highest safety stock and reorder points here, and review them weekly. Amoxicillin has the lowest margin (31.8%), so a stock-out costs most revenue while over-stocking ties up the most capital: use tight reorder cycles, not large buffers.	High
2	**Push Cetirizine (highest margin, high volume)**	Cetirizine earns a 50.4% margin and 8,067 units (the highest of any medicine) yet contributes only 9.1% of revenue. Give it shelf prominence and keep stock deep enough to meet demand; each unit sold is the most profitable in the range.	High
3	**Keep Paracetamol lean but never out of stock**	Paracetamol is the lowest-revenue item (6.0%) but sells 7,389 units. It is a low-ticket, high-footfall product: hold a small value of stock with frequent replenishment rather than bulk orders.	Medium
4	**Stock generic vs branded by category, not by blanket policy**	Overall margin is almost identical (Generic 38.4% vs Branded 38.3%) and unit sales are close (22,716 vs 23,015). Revenue leader differs by category: Branded leads Antibiotic (+17%) and Antihistamine (+25%); Generic leads Antidiabetic (+22%) and Lipid Lowering (+11%). Weight shelf space and reorder quantity toward the leading formulation in each category.	Medium
5	**Review the discount policy**	Discounts do not lift volume: avg units per transaction is 45.4 at 0% discount vs 46.4 at 10% (+2%), while margin falls from 40.1% to 33.5%. Total discounts given: about INR 65,000. Restrict the 10% tier to near-expiry or slow-moving stock.	High
6	**Use category-specific safety stock for volatility**	Monthly revenue is volatile: Antihypertensive (CV 35%) and Antidiabetic (31%) swing most; Antibiotic is steadiest (18%). Set larger safety buffers for the volatile categories and track a rolling 3-month average rather than reacting to single months. Jan→Aug: Antihypertensive (+24%) and Antibiotic (+21%) ended higher; Lipid Lowering (−43%), Antidiabetic (−34%) and Analgesic (−20%) ended lower, though January was an unusually strong month for Lipid Lowering.	Medium
7	**Investigate the Pune West gap**	Pune West has the lowest revenue (INR 3.70 lakh vs 4.32–4.84 lakh elsewhere) and the fewest transactions (181 vs 200–208). Check footfall, range availability and stock-outs before allocating more inventory there; Bengaluru East is the top store (INR 4.84 lakh).	Medium

Data limitations

• Only 6 medicines and 8 months of data (August is partial), so seasonality cannot be established and monthly growth rates are noisy.

• Unit price and unit cost are identical for the generic and branded version of each drug, so margin differences between formulations come only from sales mix and discounts.

• No stock-on-hand, expiry or lead-time data was provided; reorder levels should be calibrated with those before implementation.

Method: Net revenue is taken as given in the dataset (it reconciles exactly with units × unit price × (1 − discount) for all 1,000 rows). Profit = net revenue − units × unit cost; margin = profit ÷ net revenue. All figures are calculated by live formulas in the companion workbook.
